ROSI BMS – The world's most used BGM software

- › Per today, ROSI BMS is installed on more than 170 cruise ships. It is completely DANTE compatible, works with analogue soundcards and from now on delivers internal streams as well.
- › The new version is especially developed for ships with an older network technology. ROSI BMS streams music to an unlimited amount of settop boxes on your ships. Any normal network connection suffices.

More EBH Cruise Line Products:

Music Concert Videos · Silent Disco for your discotheques during daytime · Music clips from the "golden 80s – 2000s" for your silent disco · Cruise Line Radio (sales and marketing tool) · SYNTHIA TTS Software

Your benefits are clear:

- › ROSI BMS is automatically updated with new music once a week
- › No track repetitions within 5 days
- › Playlist is scheduled – not shuffled
- › Amazing: The Drop In functionality. Example: If you cruise near Spain ROSI "drops in" Spanish tracks into your channels every five songs. It gives your ship a Spanish touch.
- › The same technology can be used for Christmas tracks between December 1st and 26th.
